

Your Best Protection Against Cyberattack Is a Proactive Defense

Regardless of industry, corporate data and IT assets are under attack. As of September 2021, cyberattacks had resulted in nearly 1300 data breaches — one of the highest annual tallies, ever. To help ensure you won't be next, JETT's experts have developed a

targeted offering, the JETT IT Security Playbook. It enhances the core protections — a firewall, VPN remote access, and endpoint detection and response (EDR) — with three add-on protections our experts consider critical for your security:

Multi-Factor Authentication (MFA)

With 65% of employees reusing usernames and passwords, your firm cannot tolerate weak authentication mechanisms. MFA provides the highest level of protection. However, if improperly configured, even the industry's gold standard Microsoft Authenticator can put company data at risk. Our seasoned team will expertly configure this tool, train your staff on its proper use, and manage it moving forward.

Dark Web Monitoring

In the first half of 2021 alone, organizational data breaches exposed 188 billion records, many of which ended up on the Dark Web. Our Dark Web Monitoring services proactively scan the Dark Web, checking for the sale of your credentials, and helping you mitigate the damage if they are there. While it's impossible to delete data from the Dark Web, it is imperative to render your stolen credentials useless to criminals.

Phishing Training and Testing

90% of all breaches start with phishing that targets your employees. To help your personnel recognize and avoid these threats, JETT offers expert phishing training. Delivered in easy-to-digest, 3-5 minute, self-paced online segments, the training is followed up with periodic testing of your users to assess their vigilance and determination to protect your intellectual property.

The IT Security Playbook: Reducing Risk; Boosting Outcomes

Our IT Security Playbook and the services we recommend are informed by 35+ years of experience. Orchestrated by our industry specialists, the Playbook was developed using unique, expert cybersecurity models and calculations.

Offered as a single, managed package for your convenience, the core protections incorporated within the Playbook can also be bundled with personalized assistance from our IT security experts. We also can deliver additional measures beyond this core that may be needed for your operation.

Suspect Your Firm's Systems May Have Been Hacked? Stop Reading and Call Us NOW!

A successful cyberattack can circulate undetected for weeks, months or even years. It can spread to your vendors, partners and clients. If you suspect a hack, rapid mitigation is mission critical.

Contact us today for a complimentary domain search on the Dark Web to determine if any of your compromised credentials are up for sale.

The Consequences of Inaction Can Be Ruinous

Data breaches and other cyberattack consequences can remain undiscovered for years. Exacerbating the danger, 60% of small-to-mid-sized businesses (SMBs) that are attacked will eventually go out of business. Our experts want to help ensure your firm isn't one of them.

In a no-obligation consultation, we can discuss your exposure points, share threats specific to your industry and answer all your questions about our IT Security Playbook. To get started, call **770.667.6178**.
